

District of Columbia Fuel Resource Mix Disclosure
Source Power & Gas LLC
 Period January 1, 2017 through June 30, 2017

When you choose a power supplier, that supplier is responsible for generating and/or purchasing power that is added to the power grid in an amount equivalent to your electricity use. Electricity customers served by Source Power & Gas LLC are supplied by residual power purchased from the PJM Interconnection (PJM), the local regional transmission organization. Source Power & Gas LLC does not provide power from any particular generating facilities; rather, the PJM residual power purchased by Source Power & Gas LLC consists of electricity from a variety of power plants that the PJM then transmits throughout the region as needed to meet the requirements of all customers in the PJM territory (including Pennsylvania, New Jersey, Maryland, and Washington, DC).

Source Power & Gas LLC will report fuel sources and emissions data from PJM to its customers twice annually, allowing customers to compare data among the companies providing electricity service in District of Columbia.

The source of this information is PJM Generation Attributes Tracking System (GATS).

<u>PJM Residual Mix</u>		<u>Fuel %</u>
Nuclear		36.5%
Coal		32.7%
Gas		24.8%
Oil		0.2%
Renewable Energy		
	Solar	0.2%
	Wind	3.1%
	Captured Methane Gas	0.3%
	Hydro	1.5%
	Solar Voltaic	0.2%
	Solid Waste	0.5%
	wood	0.2%
Total		<u><u>100%</u></u>

<i>Air Emissions</i>	<u>Emission Type</u>	<u>Lbs. per MWH</u>
	Nitrogen Oxides (NO _x)	0.6763
	Sulfur Dioxide (SO ₂)	0.8219
	Carbon Dioxide (CO ₂)	936.9709
	CO ₂ is a "greenhouse gas," which may contribute to global climate change. SO ₂ and NO _x released into the atmosphere react to form acid rain. NO _x also react to form ground level ozone, an unhealthful component of "smog."
